Disclaimer

The information provided here will show you how to build a shed. However, howtoplans.org does not claim that the recommended techniques are the only way to accomplish this task. It will be the responsibility of each customer to ensure the application of the correct construction methods and the use of the proper materials.

In addition to the selection of the materials, the customer will be responsible for such construction tasks as caulking, flashing, gluing, insulating, and nailing, and for adequate workmanship in the areas of installation, roofing and weatherproofing, as well as for any other skills that are beyond the control of the designer. The materials mentioned in the plans do not represent an endorsement or recommendation of any particular product.

The Responsibility of Users

Despite our commitment to presenting accurate information, howtoplans.org is not liable for any errors or omissions appearing in the plans. Furthermore, howtoplans.org will not be liable for any consequential, special, incidental or indirect damages resulting from the use of this information. Our freedom from liability also extends to such issues as the loss of anticipated profits or business opportunities, and economic losses stemming from the use of howtoplans.org, regardless of whether there has been notification of such damage.

Liability

Those who utilize the methods described on howtoplans.org will be responsible for their own actions. We are not liable for any injuries or property damage that may arise from the use of the information appearing on this website. If you decide to use these plans, you should use only quality materials and should always follow good safety practices. In the event that you are unable to complete the project on your own, you should contact a certified contractor to ensure that construction is completed in accordance with the highest standards.

Permissions

It is important to understand that planning and permission issues are dependent upon local requirements. Users of these plans are responsible for complying with the appropriate statutes and regulations, and for the proper implementation of the plans or other construction information provided by howtoplans.org. The city or county office in your area should be able to provide you with the relevant information.

Copyright

The text and illustrations that appear here are the exclusive property of howtoplans.org and are protected by federal copyright laws. The one-time use of the plans is limited to anyone who purchases them. The duplication, publication, sale or distribution of any portion of these plans without prior written consent from the original designer will be subject to the appropriate penalties for copyright infringement.

| **Front/Back/Side Wall Exterior Siding** | • Pressure-Treated Lumber  
                            • Wood siding boards  |
Foundation Preparation

1.1 Clear the area where you want to build the shed and layout for the foundation. Use the below illustration as a guide.

1.2 For the foundation, dig the trenches at least 1 foot wide and 1 foot deep.

1.3 Fill the trenches to ground level with concrete and let cure, or harden. Since curing times vary between brands, read the packaging for recommended curing times.

1.4 Once the concrete has cured, use standard-sized bricks and lay them across the foundation. You will need roughly 230 bricks for this step.
Framing the Floor

2.1 Assemble the frame using 1 1/2” x 7 1/4” pressure-treated lumber. You will need fifteen boards cut to 11'-9” that will be the joist.

2.2 Secure the beams with 8x5” wood screws.

2.3 Using a speed square or carpenter’s square, check the corners to make sure they are 90°.
### Assemble Front Wall Frame

3.1 Using 1 1/2" x 3 1/2" and 3 1/2" x 3 1/2" pressure-treated lumber, construct front wall frame using the drawing below as a reference. You will need one board cut to 11" and two boards cut to 6" that will be the cripple studs, one board cut to 2'-8" that will be the door header, two boards cut to 3'-4" that will be the window header and rough sill, sixteen boards cut to 6'-11" and two boards to 2'-10" that will be the studs, two boards cut to 8'-8" that will be the bottom plates and one board cut to 20' that will be the top plate.

3.2 Connect the beams with 2x4" wood screws.

3.3 Using a speed square or carpenter’s square, check the corners to make sure they are 90°.

**Diagram:**

- 1'-1/2" x 1'-1/2" x 11 3/4" x 1'-1/2" x 1'-1/2" x 1'-3 1/4" x 1'-1/2" x 1'-3 1/4" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 1'-1/2" x 5 x 1'-1/4" x 10 1/2" x 3 1/2" x 6'-11" x 8'-8" x 8'-8" x 2'-10" x 6'-11" x 8'-8" | 20' |
Assemble Back Wall Frame

4.1 Using 1 1/2” x 3 1/2” and 3 1/2” x 3 1/2” pressure-treated lumber, construct back wall frame using the drawing below as a reference. You will need seventeen boards cut to 6'-11” that will be the studs and two boards cut to 20’ that will be the top and bottom plates.

4.2 Connect the beams with 2x4” wood screws.

4.3 Using a speed square or carpenter’s square, check the corners to make sure they are 90°.
Assemble Right Wall Frame

5.1 Using 1 1/2” x 3 1/2” pressure-treated lumber, construct side wall frames using the drawing below as a reference. You will need four boards cut to 5 1/2” that will be the cripple studs, four boards cut to 2'-10 1/2” that will be the studs, two boards cut to 3'-4” that will be the window header and rough sill, ten boards cut to 6'-11” that will be the studs and two boards cut to 11'-5” that will be the top and bottom plates.

5.2 Connect the beams with 2x4” wood screws.

5.3 Using a speed square or carpenter’s square, check the corners to make sure they are 90°.
Assemble Left Wall Frame

6.1 Using 1 1/2” x 3 1/2” and 3 1/2” x 3 1/2” pressure-treated lumber, construct left wall frame using the drawing below as a reference. You will need six boards cut to 6’-11” that will be the studs, two boards cut to 1’-8 1/2” that will be the bottom plates and one board cut to 11’-5” that will be the top plate.

6.2 Connect the beams with 2x4” wood screws.

6.3 Using a speed square or carpenter’s square, check the corners to make sure they are 90°.
Assemble the Roof Frame

7.1 Using 1 1/2 “ x 5 1/2 “ pressure-treated lumber, cut thirty four rafters 7'-8 1/2" long.

7.2 Using 1 1/2” x 3 1/2” pressure-treated lumber, cut fifteen collar ties 5'-11 3/4" long.

7.3 Using 3/4 “ x 7 1/4 “ pressure-treated board, cut the ridge board 20' long according to the illustration below.

7.4 Connect the beams with 2x3” wood screws.
Install Plywood for the Roof

**8.1** Cut sheets of 9/16” plywood for the roof sheathing using the drawing below as a guide. You will need two 4’ x 7’-9” sheets, eight 3’-8 3/4” x 7’-9” sheets and two 1’-8 1/4 x 7’-9” sheets.

**8.2** Secure the plywood with 2” wood screws.
Assemble and Install Shed Door

9.1 Build the door frame for the shed using 1 1/2 “ x 3 1/2 “ pressure-treated lumber and secure with 5” wood screws. You will need two boards cut to 5'-11 3/4" that will be the vertical girts and two boards cut to 2'-3/4" that will be the horizontal girts.

9.2 Prepare the 9/16" plywood sheet with dimensions 2'-7 3/4" x 5'-11 3/4" for the door according to the drawing.

9.3 Use 2 1/2 “ x 3/4 “ pressure-treated lumber for the door trim and fasten with 2” wood screws. You will need two boards cut to 2'-2 3/4" and two boards cut to 5'-11 3/4”.

9.4 Using 1/4 “ x 3/4 “ pressure-treated lumber, cut and install a starter course 2'-2 3/4" long.

9.5 For the exterior siding on the door, use 1/2 “ x 6” wood siding boards and the illustration below as a reference.

9.6 Assemble siding shields with 2” galvanized nails.

9.7 Install three 3” door hinges using 6x1” wood screws. Finish the doors installation by attaching 6” door pull.
Roof Sheathing Installation

10.1 You will need 325 Sq Ft of asphalt shingle roofing.

10.2 Add the metal drip edge to the fascias.

10.3 Cover the plywood with building paper.

10.4 Install asphalt shingle roofing using an industrial stapler.
**Window Installation for the Front and Right Walls**

It is necessary to prepare 2 windows.

11.1 Using 1 1/2 “ x 2 1/2 “ pressure-treated lumber, assemble the outer frame for the window as shown in the drawing below. You will need two boards cut to 3’-1” that will be the vertical girts and two boards cut to 3’-4” that will be the horizontal girts. Additionally, add vertical 2’-11 1/2” long and horizontal 3’-1” long supports using 3/4” x 1” lumber and cut the recesses for the window hinges.

11.2 Use 1 1/2 “ x 1 1/2 “ pressure-treated material to make the inner frame and secure with 3” wood screws. You will need two boards cut to 2’-9 3/4” that will be the vertical girts and two boards cut to 3’-3/4” that will be the horizontal girts. Mill a recess for the glass panes and for the hinges.

11.3 Use 1 1/4” x 1 1/2” pressure-treated material to make the inner frame supports and secure with 3” wood screws. You will need two boards cut to 2’-9 3/4” and mill a recess for interconnection.

11.4 Prepare and install glass into inner frame groove and fasten it by window beading from four sides. Use 1/2” galvanized nails.

11.5 Install two hinges (3”) with 6x1” wood screws and assemble the window. Install a lock on the inner side of the window (see nodes J, K).
Assemble and Install Car Doors

12.1 Build the door frames for the shed using 1 1/2" x 3 1/2" pressure-treated lumber and secure with 5" wood screws. You will need two boards cut to 6'-5 1/4" that will be the vertical girts, two boards cut to 3'-11 3/4" that will be the horizontal girts, two boards cut to 4'-7" that will be cross braces and one board cut to 3'-4 3/4" that will be middle girt.

12.2 Use 2 1/2" x 3/4" pressure-treated lumber for the door trim and fasten with 2" wood screws. You will need two boards cut to 3'-6 3/4" and two boards cut to 7'-1/4".

12.4 Using 1/4" x 3/4" pressure-treated lumber, cut and install a starter course 3'-6 3/4" long.

12.5 For the exterior siding on the door, use 1/2" x 6" wood siding boards and the illustration below as a reference.

12.6 Assemble siding shields with 2" galvanized nails.

12.7 Install six 3" door hinges using 6x1" wood screws.
Finish the doors installation by attaching 6" door pulls (see nodes N, O).
Assemble and Install Lifting Garage Door.

13.1 As an alternative to a simple swing gate, you can install a lifting garage door. Before ordering, make sure that the width of the opening corresponds to the width of the gate.

13.2 Install all elements of the gate according to the instructions with self-tapping screws to the beams of the walls and roof.
